RTD-150T
Graphic Repeater 10"

Description

The RTD-150T repeater is a graphic repeater for Detnov addressable system.

It allows the visualization and graphical management of fire detection system using its modern and user friendly 10" touch-screen.

It allows to create a network of repeaters, using the existing Ethernet or WIFI infrastructure.

At least one device must be connected using RS485 to an addresable control panel with a TMB-151 communication card.

Features

° 10" display
° Quick access point information
° Could be fitted on the wall
° Wired or WIFI connection

●detnov

Applications

RTD-150T repeater is the ideal complement for any fire detection installation that requires monitoring in a graphical format, making the interaction with the user easier and more intuitive.

Supresses the need to install the fire detection control panel at any visible place, such as a reception point in a hotel.

It is ideal for installation where a large number of repeaters is required, such as the different floors in a hospital.
